MODERN SAVAGE

Launch Command Dashboard

This turns the previous strategy work into an operator screen Jesse can actually use. Update the assumptions on the right and the dashboard recalculates the commercial picture, risk band, and what action the business should take next.

Weighted AOV

$81.95

Breakeven CAC

$48.45

Base contribution

$6.45

90-day gross profit

$71.65

STATUS

Refine before scaling

Yellow zone

The brand is alive, but the economics still need protection.

Built from the launch model, conversion blueprint, and retention playbook already in the workspace.

SCENARIO OUTPUTS

SCENARIO	CAC	CONTRIBUTION	MARGIN	CALL
Good	$32.00	$16.45	20.1%	Scale
Base	$42.00	$6.45	7.9%	Refine
Weak	$55.00	$-6.55	-8.0%	Fix

OFFER MIX VISUAL

WHAT TO DO NEXT

- Make the 2-bottle bundle the merchandising hero. Right now too much demand is likely landing on the weakest AOV path.
- The machine is fragile. Tighten page conversion and increase bundle take rate before expanding spend.

OPERATING GUARDRAILS

- Green zone: CAC under $35 with healthy bundle mix and clean refunds.
- Yellow zone: CAC $35–$42. Page may convert, but the machine is fragile.
- Red zone: CAC above $42 unless retention is proving out hard and fast.
- Use this alongside weekly tracking of CAC, CVR, AOV, bundle mix, subscription share, and refund rate.
