Modern Savage — UK Competitive Landscape

Built April 29, 2026. For Jesse's use when positioning Modern Savage at launch.

The short version

The UK organ supplement market is early-stage. There is one established competitor (Ancestral Supplements), one major US brand with no serious UK presence (Heart & Soil), and a long tail of small UK-made single-organ products. Modern Savage enters with better pricing, a stronger celebrity anchor, and a community model that none of the competitors have. The window is real.

Primary competitor: Ancestral Supplements

Launched UK: March 2023. Three years in market.

Channel: Amazon UK only. No UK DTC presence. No community.

Pricing:

- Beef Liver: £52/month
- Beef Heart: £56/month
- Beef Kidney: £54/month
- Beef Spleen: £58/month

If a customer wants the same organ coverage as Modern Savage (liver + heart + kidney + spleen), they pay **£220/month** across four Ancestral products.

Modern Savage at £59/month is 73% cheaper for equivalent organ coverage.

Positioning: "Nature's best multivitamin." Functional, not aspirational. No celebrity. No brand story. No community.

Origin: US company (New Zealand and Australia sourced organs). Selling into UK via Amazon. British customers have no reason to feel any brand loyalty beyond the product.

Their vulnerability: Amazon is a search-first, loyalty-last channel. Customers who find Ancestral via Amazon search will just as easily find Modern Savage if it's there — or switch when Bear Grylls is on their Instagram.

Secondary competitor: Heart & Soil (Paul Saladino)

Status in UK: US-based, ships internationally but no UK DTC operation. Not on Amazon UK in any serious way. Saladino's reach in the UK is real but his UK commercial presence is minimal.

Why this matters: Saladino's audience is the same audience Modern Savage is targeting. But he's positioned as a US expert brand, not a UK lifestyle brand. Bear Grylls is not Paul Saladino — Bear's brand is warmer, broader, more faith-and-family, less carnivore-ideology. These are different emotional territories.

Their vulnerability: Saladino's "no plant" extremism is a polarising position in the UK market. Bear's more balanced framing ("ancestral + modern") plays wider.

UK-made alternatives (long tail)

Several small UK brands sell single desiccated organ capsules: Winston's, Human Food Bar, and various Amazon-native labels. None have celebrity backing, funding, or community infrastructure. All sell single organs at £30-55 per product. None pose a threat to a properly launched Modern Savage.

Modern Savage's competitive advantages — stated plainly

FACTOR	ANCESTRAL SUPPLEMENTS	MODERN SAVAGE
Price for full organ stack	£220/month	£59/month
Celebrity anchor	None	Bear Grylls (26M Instagram)
Community	None	Subscription + community model
UK brand identity	American company	UK brand, British founder story
Channel	Amazon only	DTC first
Blend vs single organ	Single organ only	Liver + heart + kidney + spleen + colostrum in one capsule

The pricing story Calvin should tell

"The equivalent of what's in one Modern Savage bottle would cost you £220 in single-organ Ancestral Supplements products. We're £59. And ours comes with Bear Grylls telling you why it works."

That's not just a price argument. It's a value argument. Most of the target customer doesn't want to manage four different supplement bottles. They want one thing that works.

What to watch before launch

1. **Amazon entry timing.** Modern Savage should be on Amazon UK at launch (or shortly after). If a customer searches "organ supplements UK" and finds Ancestral but not Modern Savage, that's a lost acquisition. Calvin's Amazon setup brief covers this — the window is tight given the June 17-July 15 ship date, but FBM from July 1 is achievable.

2. **Ancestral's marketing activity.** They've been in the UK three years without celebrity backing or real marketing. If they sense a well-funded competitor entering, they could move. Watch for any influencer activations on their UK channels around June-July.

3. **Paul Saladino's UK push.** If Saladino ever does a UK launch properly (unlikely but possible), it would eat into Modern Savage's launch window. He has the audience. He's never had a UK commercial presence. Monitor.
