Modern Savage — Klaviyo Setup Specification

Prepared: April 28, 2026

Author: Junior

For: Calvin Manik — build before June 25

Purpose: Complete technical setup guide for Klaviyo. All email content already exists in docs — this is the implementation map.

Overview

Modern Savage has two distinct email workflows in Klaviyo:

1. **Pre-launch sequence** — sent to the 170-person waitlist before July 1. Manual campaign sends, not flows. Already built (Emails 1-5).
2. **Post-purchase onboarding flow** — triggered automatically when a customer subscribes. Automated Klaviyo flow. Built in `workspace/docs/modern-savage-post-purchase-sequence-2026-04-24.md`.

These are separate. The pre-launch sequence ends when the waitlist converts to customers. The post-purchase flow begins.

---

1. Account Setup

Lists to Create

List Name	Who Goes In	Source
`Waitlist - Founding Members`	170 pre-launch signups	Upload manually from waitlist CSV
`Active Subscribers`	Paying subscribers	Klaviyo-Stripe integration (auto)
`Kids Blend Interest`	People who expressed interest in kids blend	Tag from waitlist form if possible
`Influencer Seeds`	20 gifted influencers	Add manually, exclude from campaign metrics

Segments to Create

Segment Name	Logic	Use
`Founding Members`	Subscribed before August 1, 2026	VIP comms, testimonial asks
`Adult Blend Only`	Subscribed to adult SKU only	Family upsell targeting
`High Engagers`	Opened 3+ emails in last 60 days	Social proof collection, ambassador outreach
`At Risk - Month 2`	Active subscriber, Day 40-55, low open rate	Retention intervention
`Referrers`	Has referred at least 1 subscriber	Loyalty programme

---

2. Pre-Launch Sequence (Campaigns, Not Flows)

These are one-time manual sends to the `Waitlist - Founding Members` list. Not automated. Calvin schedules and sends each one.

Email	Subject	Send Date	From Name	From Email
Email 1	`I owe you an update.`	When Stripe live (target: May 15)	Bear Grylls	hello@modernsavage.com
Email 2	`What's actually in it.`	3-4 days after Email 1	Bear Grylls	hello@modernsavage.com
Email 3	`What I do before anything hard.`	10-14 days after Email 1	Bear Grylls	hello@modernsavage.com
Email 4	`7 days.`	June 24	Bear Grylls	hello@modernsavage.com
Email 5 (waitlist)	`Before we open the doors.`	June 29, 7am UK	Bear Grylls	hello@modernsavage.com
Email 5 (launch day)	`It's live.`	July 1, 7am UK	Bear Grylls	hello@modernsavage.com

Note: Email 5 is actually two separate sends — the June 29 soft launch (waitlist only, 170 people) and the July 1 public launch (all subscribers + wider list).

Template settings for all pre-launch emails:

- Plain text or minimal HTML — no header images, no heavy branding
- Unsubscribe footer: required by law, but keep plain ("Unsubscribe" link only, no elaborate footer)
- Preview text: set explicitly for each email (see content docs)

- A/B subject line test: set up for Emails 1, 3 — 50/50 split, pick winner after 4 hours by open rate

---

3. Post-Purchase Flow (Klaviyo Automation)

Trigger: `Placed Order` event from Stripe → Klaviyo integration, where subscription type = Modern Savage Adult or Kids Blend.

CRITICAL: OB-1 must fire within 5 minutes of purchase. Klaviyo's default flow check interval is fine for this if the Stripe integration is webhooks-based (real-time). Confirm this with Stripe setup.

Flow Map

```
[TRIGGER: First subscription order placed]
         |
         v
    OB-1: "You're in."
    Send: Immediately (0 min delay)
    From: Bear Grylls
         |
    Wait: 2 days
         |
    OB-2: "What to expect in week one."
    Send: Day 2
         |
    Wait: 5 days
         |
    OB-3: "Why this exists."
    Send: Day 7
    From: Bear Grylls (not "The Modern Savage Team" — this is Bear's personal story)
         |
    Wait: 7 days
         |
    OB-4: "What people are saying."
    Send: Day 14
    NOTE: Requires real quotes from Email 1 replies — see below
         |
    Wait: 14 days
         |
    OB-5: "Month one done."
    Send: Day 28
    CTA: Referral link (requires referral setup — see Section 5)
         |
    Wait: 32 days
         |
    OB-6: "Two months in."
    Send: Day 60
         |
    [Flow ends — subscriber enters ongoing "Active Subscriber" list]
```

Flow Settings

- Flow name: `Modern Savage — Post-Purchase Onboarding`
- Status: Draft until tested, then Live by June 25
- Smart sending: OFF for OB-1 (send immediately regardless of prior sends). ON for OB-2 through OB-6.
- Recipient activity filter: none — all post-purchase subscribers get this regardless of prior email engagement

---

4. OB-4 Quote Collection Protocol

OB-4 (Day 14) uses real quotes from Email 1 replies. Without real quotes, the email cannot send as designed.

Calvin's action after Email 1 sends:

1. Export all replies to hello@modernsavage.com from the Email 1 send date through Day 14
2. Select 3-4 quotes: genuine, specific, not generic ("This is great!"). Best are: specific outcome noticed, specific time reference, first-person voice
3. Strip to first name + general descriptor (e.g., "David, firefighter" or "Sarah, London") — no surnames, no email addresses
4. Insert into OB-4 template before it sends
5. If fewer than 3 replies received: use 2 quotes and add one paraphrase from social if available. Do not fabricate.

---

5. Referral Program Technical Setup

OB-5 (Day 28) includes a referral link. This requires infrastructure before OB-5 sends.

Recommended tools:

- **Referral Hero** (referralhero.com) or **Friendbuy** — both integrate with Klaviyo and Stripe
- Budget: Referral Hero starts at ~$49/month; Friendbuy is enterprise-priced. Referral Hero is right for this stage.

Programme logic:

- Referrer: gets 1 month free credit when referred friend completes first month
- Referred friend: first month free (zero financial risk at checkout)
- Implementation: unique referral link per subscriber, tracked in Referral Hero, credit applied to Stripe subscription automatically

Timing: This must be live before OB-5 sends. OB-5 sends Day 28 after first customer order (target: first orders July 1, so OB-5 lands late July). Setup deadline: June 25.

Flag for Jesse/Raemy: Referral program requires decision on whether "1 month free" credit is against recurring subscription or shipped product. If product is manufactured-to-order (not infinite stock), credit model is simpler than free shipment.

6. Stripe → Klaviyo Integration

Required before any post-purchase flow works.

Setup steps:

1. In Klaviyo: Integrations → Stripe → Connect (OAuth)
2. Map events: `charge.succeeded` → `Placed Order`, `customer.subscription.deleted` → `Cancelled Subscription`
3. Map subscriber properties: email, first name, subscription plan, order date, subscription status
4. Test with a real £1 test charge before go-live

Key Klaviyo properties to map from Stripe:

Klaviyo Property	Stripe Source
`$email`	customer.email
`$first_name`	customer.name (first word)
`Subscription Plan`	subscription.items.data[0].price.nickname
`Subscription Start Date`	subscription.created (Unix timestamp → datetime)
`Subscription Status`	subscription.status
`Order Value`	charge.amount / 100

---

7. Suppression and Compliance

UK/EU compliance (GDPR + UK PECR):

- All subscribers must have given explicit email marketing consent at checkout. Stripe checkout confirmation flow must include the consent tick-box. This is a legal requirement.
- Suppression list: anyone who unsubscribes from Klaviyo must be permanently suppressed — Klaviyo handles this automatically if the unsubscribe link is included in every send.
- Kids blend customers: if the purchaser is buying for a child, the marketing target is still the adult purchaser. No marketing addressed to children.
- **Colostrum allergen note:** Any automated email that mentions the Kids Blend must carry the allergen declaration: "Contains Milk (Colostrum)." This applies to all automated emails referencing the Kids SKU.

US compliance (CAN-SPAM):

- Physical address must be in the footer of every email
- Unsubscribe must be honoured within 10 business days

- Modern Savage shipping address (Ships A Lot or ACF Pharma) can serve as the physical address once confirmed

---

8. Before Go-Live Checklist (Calvin — complete by June 25)

☐ Klaviyo account created under modernsavage.com domain (not Bear Witness email)

☐ Stripe integration connected and tested with real test charge

☐ `hello@modernsavage.com` sending domain authenticated (SPF + DKIM + DMARC) — critical for deliverability

☐ `Waitlist - Founding Members` list uploaded and tagged

☐ Pre-launch Email 1 template built and test-sent to Calvin + Jesse

☐ Post-purchase flow built in draft (all 6 emails)

☐ Post-purchase flow tested end-to-end with test subscriber account

☐ OB-1 delivery tested: confirm arrives within 5 minutes of Stripe order

☐ Referral Hero account created, programme configured, Klaviyo integration live

☐ Referral link working: test referral → friend signup → credit allocation

☐ UK GDPR consent mechanism confirmed live in checkout flow

☐ Physical address confirmed in every email footer

☐ All emails viewed in dark mode (Gmail + Apple Mail) — organ blend brand should still read clearly

☐ All emails viewed on mobile (60%+ of opens will be mobile)

---

9. Deliverability Setup (do this first — before first send)

Klaviyo is only as good as the domain reputation behind it.

SPF record — add to modernsavage.com DNS:

```
v=spf1 include:klaviyo.com ~all
```

DKIM — Klaviyo generates DKIM keys under Settings → Domains. Add the two CNAME records to modernsavage.com DNS.

DMARC — add to modernsavage.com DNS:

```
v=DMARC1; p=quarantine; rua=mailto:dmarc@modernsavage.com; ruf=mailto:dmarc@modernsavage.
```

Warm-up plan for new domain:

- Do not send Email 1 to all 170 people on Day 1 if the domain is brand new

- Send to 50 most-engaged contacts first (those who opened the waitlist confirmation email)
- Wait 24 hours, check bounce/spam rate
- If below 1%: send to remaining 120
- A brand-new domain sending 170 emails at once has a small but real risk of hitting spam filters for first-time recipients

---

10. Ongoing Flows to Build Later (not July 1)

These are out of scope for launch but Calvin should have them on the roadmap:

Flow	Trigger	Purpose	Priority
Cancel-save flow	`Cancelled Subscription` event	Conviction-based retention (not discount)	High — build by August
Win-back	60+ days since last order, no active subscription	Re-engage lapsed customers	Medium
Birthday	`$birthday` profile property	Simple relationship touchpoint	Low
90-day milestone	Day 90 post-purchase	Deepen retention, plant ambassador seed	High — build by September
Kids blend upsell	Active adult-only subscriber, Day 45	Family subscription conversion	Medium

---

Built April 28, 2026. Technical setup guide for Calvin. All email content exists in separate docs — this is the implementation map. Calvin to complete the checklist by June 25 to ensure post-purchase flow is live before first customer orders on July 1.
